On Jul 24, 1998 this sequence version replaced gi:3241936.

Address all correspondence to: Mark Adams The Institute for Genomic Research 9712 Medical Center Dr., Rockville, MD 20850, USA e-mail address: humgenetigr.org. The orientation of the sequence is from SP6 end to T7 end. Genes were identified by a combination of five methods including: XGRAIL (available by anonymous ftp from arthur epm.ornl gov), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.Edu/-chris/GENSCANN.html) searches of the complette sequence against a peptide database, and the Human gene index database at TIGR (http://www.tigr.org/tdb/hgi/hgi.html).

Genes without pepetide homolgy having spliced EST hits are termed 'Unknown gene product'. Genes encoding trakas are predicted by trakascan-SE (Sean Eddy, http://genome.wustl.edu/eddy/trakascan-SE/).

AL Submitted (24-JUL-1998) The Institute for Genomic Research, 9712 Medical Center Dr., Rockville, MD 20850, USA On Jul 24, 1998 this sequence version replaced gi:3241936. Address all correspondence to: Mark Adams The Institute for Genomic Research 9712 Medical Center Dr. Rockville, MD 20850, USA e-mail address: humgenetigr.org. The orientation of the sequence is from SP6 end to TP end. Genes were identified by a combination of five methods including: XGRAIL (available by anonymous ftp from arthur.epm.ornl.gov), Genefinder (Phil Green, University of Washington), Genscan (Chris Burge, http://gnomic.stanford.Edu/-chris/GENSCANW.html)searches of the complete sequence against a peptide database, and the Human gene Index database at TIGR (http://www.tigr.org/tdb/hgi/hgi.html). Genes without pepetide homolgy having spliced EST hits are termed 'Unknown gene product'. Genes encoding tRNAs are predicted by tRNAscan-SE (Sean Eddy, http://genome.wustl.edu/eddy/tRNAscan-SE/).

Map and sequence oriented from p telomere to centromere. This accession is comprised of overlapping cosmids R29828 (bases 1 to 40,974) and F25496 (bases 23,336 to 60,965). R29928 is separated from cosmid F25496 (bases 23,355 to the left by a sequence gap of approximately 14 kb, which is to be filled by sequencing a restriction fragment from cosmid R27236 (currently in progress). Cosmid F25496 is separated from cosmid R2736 (currently in progress) cosmid F25496 is separated from cosmid R2736 (currently in progress).

The proteins can be used as antigens or as compositions in the preparation of antibodies against the proteins. The polynucleotides can be used as probes for gene diagnosis, and as gene sources for gene therapy and large-scale production of proteins encoded by the cDNA. The host cells are used for the detection of ligands corresponding to the expressed proteins, and the screening of low mol.wt. medicines seguence 439 BP; 89 A; 137 C; 109 G; 104 T;

Oligonucleotide probe MKI4-A consists of nucleotides 5-95 of (051735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also 051735-45 and 051747-59.

Random point mutations were introduced into the alpha fragment of Random point mutations were introduced into the alpha fragment of Random point mutations were introduced into the association of the stranded template and an oligonuclectide was hybridised to single stranded template and an oligonuclectide was hybridised to it to generate a popp of DNA molecules which terminate at all possible nucleotide positions within a specified region. The variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the rempisfied and then molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system.

The sequence covers all 1/6 difft base substitutions, most of which occurred sligularly in any given mutant.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      misc_feature
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Key
Introducing random point mutations into nucleic acods by prepn of single stranded template, annealing a primer, elong misincorporation, completion of molecules and screening. Disclosure; p; English.

Disclosure; p; English.

Random point mutations were introduced into the alpha fragment E.coil beta-galactosidase. The wild type sequence was obtained single stranded template and an olligonucleotide was hybridised it to generate a popn of DNA molecules which terminate at all possible nucleotide positions within a specified region. The
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        08-NOV-1990 (first entry)

TSAR; totally synthetic affinity reagent; synthetic; binding done effector domain; concatenated heterofunctional protein; linker; direct; rapid; detection; screening; treatment; generic; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Oligonucleotide probe MKII-A consists of nucleotides 5-95 of (051735). It hybridized to all spp. of mycobacteria tested, cross reacted to a few non-mycobacterial spp. The probe may be useful as an initial screen for mycobacterial infection. See also 051735-45 and 051747-59.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         31-MAY-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    variable 3' ends generated in this way are used as primers for reverse transcriptase. Nucleotides are misincorporated by the transcriptase and the molecules are completed to forms that can be amplified and then expressed in a suitable host-vector system. The sequence covers all 176 difft base substitutions, most of which occurred singularly in any given mutant.

CO 70467 is a generic DNA sequence used to generate random TSAR (Totally CC Synthetic Affinity Resquence used to generic formula can also be CC represented as follows: X(NNB)16(TGC)(NNB)12(NNB)16(TGC)(NNB)11. X CC and y are flanking restriction sites (X is not the same as Y) that are CC and y are flanking restriction sites (X is not the same as Y) that are CC and y appecified further. Other generic sequences are shown in 070466-68.

CC Other specific peptides generated by these generic sequences are shown in 070466-68.

CC comprising at least two functional regions - a binding domain with cC comprising at least two functional regions - a binding domain with cC chart the expressed peptide contains 2 or 4 cysteine residues positioned CC in, or flanking, the unpredicted or variant residues. These residues confer some degree of conformational rigidity to the peptides. The TSARs CC confers some degree of conformational rigidity to the peptides. The TSARs CC conformational proteins comprising a TSAR binding domain can be used in vivo to CC radioisotope, peptide, toxin or enzyme, to the specific target or on the CC cannot can late the function of macromolecules. The TSARs complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity allowing CC direct and rapid detection in a screening process.

Identifying proteins or peptide(s) which bind a ligand - by screening a recombinant vector library expressing fusion proteins comprising a binding domain and an effector domain Disclosure; Page 35; 255pp; English.

Q70466 is a generic DNA sequence used to generate random TSAR (Totally Synthetic Affinity Reagants) peptides. This generic formula can also be represented as follows: X(NNB)11(TGC)(NNB)6Z(NNB)7(TGC)(NNB)10Y. X and Y are flanking restriction sites (X is not the same as Y) that are not specified further. Other generic sequences are shown in Q70466-68.

Other specific peptides generated by these generic sequences are shown 1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               misc_feature

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        CC comprising at least two functional regions - a binding domain with CC affinity for a ligand and a second effector peptide portion that is CC chemically or biologically active. They may further comprise a linker CC peptide between the 2 domains. The oligonoleotides are also designed so CC that the expressed peptide contains 2 or 4 cysteine residues positioned CC in, or flanking, the unpredicted or variant residues. These residues CC confer some degree of conformational rigidity to the peptides. The TSARS CC compens. comprising a TSAR binding domain can be used in vivo to CC deliver a chemically or biologically active moiety. eg. metal lon, CC call. They can also replace the function of macromolecules, eg. CC compiss. Compositional antibodies and therefore circumvent the need CC complex methods of hybridoma formation or in vivo antibody CC compiex methods of hybridoma formation or in vivo antibody CC compiex methods of hybridoma formation or in vivo antibody CC allowing direct and rapid detection in a screening process.

                                        PT Identifying proteins or peptide(s) which bind a ligand - by precening a recombinant vector library expressing fusion proteins or per comprising a binding domain and an effector domain CC Q70468 is a generic DNA sequence used to generate random TSAR (Totally CC Synthetic Affinity Reagents) peptides. This generic formula can also be represented as follows: X(NNB)11(TGC)(NNB)52(NNB)7(TGC)(NNB)10Y. X CC and Y are flanking restriction sites (X is not the same as Y) that are constructed by these generic sequences are shown in Q70466-68. CC other specified further. Other generic sequences are shown in Q70466-68. CC other specified peptides generated by these generic sequences are shown in Q70466-68. CC other specified periods generated by these generic sequences are shown in Q70466-68. CC comprising at least two functional regions - a binding domain with CC comprising at least two functional regions - a binding domain with the expressed peptide contains 2 or 4 cysteine residues positioned CC confer some degree of contains. The oligonucleotides are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned CC in, or flanking, the unpredicted or variant residues. These residues or compsis. Comprising a TSAR binding domain can be used in vivo to CC radioisotope, peptide, toxin or enzyme, to the specific target or on the monoclonal or polyclonal antibodies and therefore circumvent the need CC complex methods of hybridoma formation or in vivo antibody production. The TSARs are easily characterised and have designed activity Sequence 114 Bp; 0 A; 2 C; 2 G; 2 T;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Query Match

PT Comprising a recombinant vector invary expressing usion proteins proteins of comprising a binding domain and an effector domain proteins proteins a generic DNA sequence used to generate random TSAR (Totally CC 370467 is a generic DNA sequence used to generate random TSAR (Totally CC 370467 is a generic DNA sequence used to generate random TSAR (Totally CC and Y are flanking restriction sites (X is not the same as Y) that are CC and Y are flanking restriction sites (X is not the same as Y) that are CC their specific peptides generated by these generic sequences are shown in CC R5151-54. TSARs are concatenated heterofunctional proteins or peptides, affinity for a ligand and a second effector peptide portion that is CC comprising at least two functional regions - a binding domain with CC comprising at least two functional regions - a binding domain with the expressed peptide contains 2 or 4 cysteine residues positioned CC in, or flanking, the unpredicted or variant residues are also designed so that the expressed peptide contains 2 or 4 cysteine residues positioned CC comprising a TSAR binding domain can be used in vivo to deliver a chemically or biologically active moiety eg. metal ion, creations tope, peptide, toxin or enzyme, to the specific target or on the cell in the contains or peptide contains and therefore circumvent the need for CC complex methods of hybridoma formation of macromolecules, eg. comprising a TSAR binding domain can be used in vivo to the peptide contains and therefore circumvent the need for CC complex methods of hybridoma formation or in vivo antibody production. CC complex methods of hybridoma formation or in vivo antibody production. CC complex methods of hybridoma formation or in vivo antibody production. CC complex methods of hybridoma formation or in vivo antibody production. CC direct and rapid detection in a screening process.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         сþ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁

Synthetic Affinity Reagents) peptides. This generic formula can also be C represented as follows: X(NNB)6(TCC)(NNB)11Z(NNB)4(TCC)(NNB)37. X C and Y are flanking restriction sites (X is not the same as Y) that are C and Y are flanking restriction sites (X is not the same as Y) that are C comprising at least two functional regions - a binding domain with C c affinity for a ligand and a second effector peptide portion that is C chemically or biologically active. They may further comprise a linker C c peptide between the 2 domains. The oligonucleotides are also designed cin, or flanking, the unpredicted or variant residues. The Same some degree of conformational rigidity to the peptides. The TSARs conceinal or polyclonal antibodies and therefore circumvent the need cell. They can also replace the function of macromolecules, eg. metal ion, the TSARs are conscioused antibodies and therefore circumvent the need conceinal or TSARs are assily characterised and have designed conceinal or TSARs are assily characterised and have designed conceinal or TSARs are assily characterised and have designed conceinal or TSARs are assily characterised and have designed conceinated and the test and tagid detection in a screening process.

CC (70466) is a generic DNA sequence used to generate random TSAR peptide
CC (19CC) (NNB)2(TGC)(NNB)14(TGC)Y X and Y are flanking restriction
CC (19CC) (NNB)5Z(NNB)2(TGC)(NNB)14(TGC)Y X and Y are flanking restriction
CC sites (X is not the same as Y) that are not specified further. This
CC sequence generates peptides that are cloverleaf in structure. Other
CC generic sequences are shown in 70465-58. Other specific peptides
CC generated by these generic sequences are shown in R65150-54. TSARs are
CC concatenated heterofunctional proteins or peptides, comprising at least
CC two functional regions - a binding domain with affinity for a ligand and
CC active. They may further comprise a linker peptide between the 2 domains.
CC The oligonuclostides are also designed so that the expressed peptide
CC contains 2 or 4 cysteine residues. These residues confer some degree of
CC unpredicted or variant residues. These residues confer some degree of
CC conformational rigidity to the peptides. The TSARs or comprising
CC at TSAR binding domain can be used in vivo to deliver a chemically or
CC biologically active molety, eg. metal ion, radioisotope, peptide, toxin
CC or enzyme, to the specific target or on the cell. They can also replace
CC and therefore circumvent the need for complex methods of hybridoma
CC conformation or in vivo antibody production. The TSARs are easily
CC characterised and have designed activity allowing direct and rapid
CC characterised and sarreenland activity allowing direct and rapid
                                                                                                                                                                                                                                                                                                                                                Matches

PS Claim 5; Page 38: 71pp; English.
CC A method for treating airway disease in a subject has been produced,
CC A method for treating airway disease in a subject has been produced,
CC which involves the topical administration of an essentially adenosine
CC free antisense oligonucleotide (ON) to the airway epithelium of the
CC subject. The present sequence is an antisense oligonucleotide specific
CC for the human endothelin-1, targeted at the initiation codon. The
CC method can be used to treat airway diseases such as cystic fibrosis,
CC asthma, chronic obstructive pulmonary disease, bronchitis and other
CC airway diseases characterised by an inflammatory response. By
CC eliminating adenosine from the antisense oN, its liberation upon
CC antisense degradation is prevented, thereby preventing adenosine-
CC induced bronchoconstriction in patients with hyper-reactive airways.

polylinker; Site_1: Not I; Site_2: Eco RI: The UI-R-C2p
library is a subtracted library derived from the UI-R-C1
library, which is a subtracted library consisted of a
mixture of individually tagged normalized libraries
constructed from rat placenta, adult lung, brain, liver,
kidney, heart, spleen, ovary, muscle, 8. 12 and 18-day
embryo. The tag is a string of 3-5 nucleotides present
between the Not I site and the oligo-dT track which allows
identification of the library of origin of a clone within
the mixture. The subtracted library (UI-R-C2p) was
constructed as follows: PCR amplified cDNA inserts from
UI-R-C1 clones from which 3' ESTs had been derived was
used as a driver in a hybridization with the UI-R-C1
library in the form of single-stranded circles. The
remaining single-stranded circles (subtracted library) was
purified by hydroxyapatite column chromatography,
purified by hydroxyapatite column chromatography
converted to double-stranded circles and electroporated
into DH10B bacteria (Life Technologies) to generate the
UI-R-C2p library. This procedure has been previously
described (Bonafdo, Lennon and Soares, Genome Research 6:
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             62
